

Cazza Construction Technology

Cazza was started in Oct. 2016 by two young men, Chris Kelsey and his business partner Fernando De Los Rios, who planned to revolutionize the building industry. The company had a lot of media attention, based on a set of good looking and inspiring visuals, showing their concrete 3D printing robot, the X1. In reality it was just ideas and dreams, and the company never took off, and never printed anything. Today the company has ceased to exist and only a few news articles remains. The website, Cazza.co no longer exists and nothing has been heard from the company since Dec. 2017.

One of the founders, Chris Kelsey have started a new company, The New World which plans to use 4x4 meter drones to 3D print buildings and place prefab elements. He claims that the drones will be available in Marts 2018.....
